(54) Title: WAVEFORM GENERATOR FOR CONTROLLING AN ELECTRON BEAM IN A CATHODE RAY TUBE

(57) Abstract: A parabola generator for providing dynamic correction includes a capacitor (C201) source of a parabolic input signal (18H) at a frequency related to a horizontal deflection frequency coupled to a first terminal of the capacitor (C201)(Fig. 1C). A diode switch (D203) is coupled to a voltage at a reference level and to a second terminal of the capacitor (C201) for periodically clamping a peak level of a signal developed at the second terminal. A transistor switch (Q401) is responsive to a periodic switch control signal and coupled to the second terminal capacitor (C201) for periodically clamping a signal applied from the second terminal, during retrace, for removing a parasitic parabolic voltage portion to generate a dynamic correction signal. The dynamic correction signal is coupled to a cathode ray tube to vary a field in a beam path of an electron beam of the cathode ray tube for providing dynamic correction.
